

I am writing in defense of XM Satellite Radio. Please reject the NAB's 04-160. I support XM's ability to provide the kind of programming that I desire and deserve. We recently took a 4000 mile trip from Texas to California and back. The XM radio was the best thing I had purchased for the trip. We spent alot of time driving in the desert and would have had to listened to CD's or nothing. It was super to have the variety and not worry about loosing the signal any second. Also the traffic and weather was great because I didn't have to search for a local station for info. I also kept tabs on weather in the area I am from.

Sincerely,
Mildreth E Beavers
